Dear Friends of GSX,

Some of you may remember from the original days of the National Skill Standards Board (NSSB), from which GSX was born, came industry-based Skill Standards partnerships set out to improve the workforce training and credentialing in their sector.

Of these, the Manufacturing Skill Standards Council (MSSC) under the leadership of Leo Reddy, has continued to make significant strides in field of manufacturing.

GSX has recently worked with the MSSC team in the development and roll out of the MSSC CLT/CLA Certification.

Recently, Fox Business reported that several Indiana based Manufacturing companies have endorsed three of the MSSC's certifications and nationally recognized credentials:

- Certified Production Technician (CPT)
- Certified Logistics Associate (CLA)
- Certified Logistics Technician (CLT)

These certifications are now identified as key building blocks in the development of a skilled manufacturing workforce.

This endorsement is a win for employees as well as employers. The CPT certification will be used as a tool for hiring and CPT credential holders will also receive preferential consideration at a number of major companies.

We are hopeful that this is a trend both in the Manufacturing sector as well as in the field of credentialing.

For more details you can reach out to me directly or visit the MSSC Website.

All the best,
